Node.js Jump Start

For teams kicking off a new project, the Node.js Jump Start package from NodeSource provides expert guidance to help you build for success from the start.

Our team of Node.js experts can help you employ industry best practices and avoid common mistakes when you're building new applications or services using Node.js or porting an existing application to Node.

Deliverables:

Architecture Evaluation	Development and Deployment Assessment	Maintenance and Management Recommendations
Expert evaluation and recommendations for your chosen stack, frameworks, and architecture.	Recommendations for development, CI/CD, and DevOps based on industry best practices.	Customized recommendations for ongoing monitoring, management, and debugging of your Node application.

Benefits:

- ✓ Learn industry best practices to avoid common mistakes and pitfalls
- ✓ Create a scalable foundation for high-quality Node.js applications
- ✓ Reduce ongoing maintenance and infrastructure costs
- ✓ Optimize development, deployment, and management of your Node.js applications

Our Approach:

Interview stakeholders to review current stack, architecture, and frameworks.

Analyze research and create customized recommendations

Present assessment and recommendations
