

Node.js Performance Consulting

Node.js performance consulting from NodeSource helps you optimize your Node application's performance.

Whether your Node.js application is still in development or has been running in production, our team of experts can identify the root cause of unsatisfactory performance and recommend changes to application code and architecture to maximize performance and deliver the customer experience for which you strive.

Deliverables:

Performance Assessment

Detailed analysis of application performance to identify anti-patterns and recommend best practices.

Improvement Plan

Identify architectural bottlenecks and performance hot paths, and recommend more performant/scalable approaches.

Enablement Training

Train team members on performance monitoring tools and diagnosis, enabling ongoing evaluation and improvement self-sufficiency.

Benefits:

- ✓ Ship faster, more performant applications
- ✓ Decrease runaway infrastructure costs
- ✓ Enable self-sufficiency for internal teams

Our Approach:

Performance consulting is available for pre-production and production applications, and includes two Senior Solutions Architects who will be on-site to work alongside your internal team.
