

npm Training

An introduction to npm, its methods, and how to best utilize npm in an enterprise setting, including understanding Node.js dependencies, npm installation and establishing a private, on-premise npm registry.

Who Should Attend:

Node Engineers

Pre-Requisites:

Understanding of JavaScript and Node.js Fundamentals

Duration:

2 Days

Learning Objectives:

By the end of training, attendees will:

- ✓ Be able to customize npm environments
- ✓ Define npm scripts, use semver and commands
- ✓ Use shrinkwrap and bundled dependencies for deployment
- ✓ Understand how to navigate npm ecosystem and find modules to meet development needs

Topics Covered:

Topics include, but are not limited to: dependency care and maintenance, productionizing, npm ecosystem, private module publishing, whitelisting, tracking 3rd party module licensing, and npm lifecycle scripts.
